Single 8" with 10" Board & Batten
Bennington Beige with Ironstone
SUSTAINABILITY

Quality Edge believes in manufacturing innovation that endures from materials that last. TruCedar steel siding utilizes one of the strongest, most versatile and recyclable materials on our planet, reducing your carbon footprint and safeguarding against costly repairs.

FUNCTIONALITY

From pencil sketch to finished profile, our entire siding collection was expertly engineered to blend the best of both durability and aesthetic. TruCedar’s steel core provides unmatched impact resistance that doesn’t crack, melt or wick water like other siding materials and perfectly mimics the look of real wood siding in a range of curated color options.

OURCES:
Steel Core

Real Wood Peeling

Vinyl Cracking, Fading

Fiber Cement Cracking

CarbonTech60™

Each TruCedar profile is enveloped in CarbonTech60 zinc coating that provides both a physical barrier and cathodic protection. This prevents moisture and oxygen from reaching the steel core, making TruCedar “Stronger Than Steel.”

PERFORMANCE

We chose a carbon-reinforced steel alloy because of its ability to protect your home against everything Mother Nature can throw at it. TruCedar’s no-nonsense lifetime warranty offers specific guarantees against cracking, chipping, peeling, chalking and fading common with other siding materials.

SunMaster50®

TruCedar SunMaster50 is a thermally set paint system that provides a strong, durable and mold-resistant surface.

Reflects Sunlight

TruCedar’s SunMaster50 paint system has the ability to reflect solar radiation—having the potential to save you money on your energy bills. This reflective ability is made possible because we coat our products with a PVDF paint, which can provide a cooler sidewall and extreme fade protection. Below are the results from a 14-year, outdoor exposure study conducted to test the fade rate of SunMaster50 against siliconized polyester (SMP) and polyester.
STANDARD CLAPBOARD SIDING VS. DUTCH LAP SIDING

Dutch lap siding has a simulated notch or bend along the top edge of the board or panel. This bend increases the strength and produces a distinct shadow that simulates a hand-cut notch in each board. Years ago, homeowners wanted more options than just the standard clapboard siding, so a carpenter would hand carve the notch along the top of each board. Since it was hand carved, it was more expensive and used on high-end homes.

Siding that runs horizontally across your house from end to end is sometimes referred to as “horizontal siding” or lap siding. Contractors generally use the terms “clapboard,” “lap siding” and “horizontal siding” interchangeably.

Available in 29 colors

Dutch lap siding

Siding that runs horizontally across your house from end to end is sometimes referred to as “horizontal siding” or lap siding. Contractors generally use the terms “clapboard,” “lap siding” and “horizontal siding” interchangeably.
**SHAKE SIDEWALL**
Available in 3 colors

TruCedar Shake Sidewall provides the natural beauty of real wood shake without the maintenance, due to the durability of the SunMaster50 PVDF paint. Used as an accent for dormers, peaks, gables and entries or as a whole-house application.

**BOARD & BATTEN**
Available in 29 colors

Board & Batten is derived from the look of alternating wide boards and narrow wooden strips, called battens. TruCedar’s Board & Batten siding provides the sharp, crisp edges of traditional real wood battens, without the scraping and repainting.
Although we make every effort to ensure color accuracy in our printing process, your final product may not be an exact match to those displayed.

HD Woodgrain colors available in:
- Double 4"
- Single 6" & 8"
- Single 6" Dutch Lap
